Ticket HD-008: Employee Requests Software Installation

Ticket ID: HD-008

Date Reported: November 12, 2026

Department: Marketing

Issue Category: Software / Application Support

Priority: Low

Status: Resolved (Simulated)

User Description:

An employee requests assistance installing an approved productivity application on their Windows workstation. The employee needs the software to complete daily work assignments.

Initial Assessment:

The technician must verify that the software is approved by the organization and that the workstation meets the application's system requirements.

Troubleshooting Steps:

1. Confirm the name and purpose of the requested application.
2. Verify that the application is approved under company software policies.
3. Check whether the employee has permission to install software.
4. Review the workstation's available storage and system requirements.
5. Obtain the installation package from an approved source.
6. Install the application using authorized procedures or escalate to an administrator if elevated permissions are required.
7. Launch the application and verify that it operates correctly.
8. Confirm that the employee can access the application.

Resolution:

The simulated technician confirms that the application is approved and compatible with the workstation. The application is installed using the organization's authorized process and successfully launches.

Final Status: Resolved

Skills Demonstrated: Software installation, Windows administration concepts, application compatibility, access permissions, software management, and technical documentation.
