Ticket HD-009: Employee Reports Suspicious Phishing Email

Ticket ID: HD-009

Date Reported: November 12, 2026

Department: Human Resources

Issue Category: Cybersecurity / Email Security

Priority: High

Status: Resolved (Simulated)

User Description:

An employee reports receiving an unexpected email claiming to be from the company's IT department. The email requests that the employee click a link and enter their company login credentials to avoid account suspension.

Initial Assessment:

The email may be a phishing attempt designed to steal employee login credentials. The request for sensitive information, unexpected urgency, and suspicious link are potential warning signs.

Troubleshooting Steps:

1. Instruct the employee not to click the link or respond to the email.
2. Ask whether the employee clicked the link or entered any credentials.
3. Preserve the suspicious email for investigation according to company policy.
4. Examine the sender address and email headers for suspicious indicators.
5. Review the link destination safely using approved security tools without opening the suspicious link.
6. Report the email to the organization's security team.
7. If credentials were entered, immediately escalate for account protection and follow incident response procedures.
8. Provide the employee with guidance on recognizing future phishing attempts.

Resolution:

The simulated technician identifies several phishing indicators, including an unexpected credential request, suspicious sender information, and urgent language. The email is reported to the security team, and the employee is advised to delete or quarantine it according to company policy.

Final Status: Resolved (Reported and Escalated)

Skills Demonstrated: Phishing detection, email security, threat identification, incident reporting, security awareness, and technical documentation
