Ticket HD-010: External Keyboard Not Responding

Ticket ID: HD-010

Date Reported: November 12, 2026

Department: Operations

Issue Category: Hardware / Peripheral Support

Priority: Low

Status: Resolved (Simulated)

User Description:

An employee reports that their external keyboard is not responding when connected to their Windows computer. The employee is unable to type using the external keyboard.

Initial Assessment:

Possible causes include a loose USB connection, a faulty USB port, outdated device drivers, a damaged keyboard, or a temporary Windows hardware recognition issue.

Troubleshooting Steps:

1. Confirm that the keyboard is properly connected to the computer.
2. Check whether the keyboard has power or indicator lights.
3. Disconnect and reconnect the keyboard.
4. Test the keyboard using another available USB port.
5. Restart the computer if appropriate.
6. Check Windows Device Manager for keyboard-related errors.
7. If available, test with another compatible keyboard.
8. Determine whether the issue is related to the keyboard, USB port, or computer.
9. Escalate the issue if hardware failure is suspected.

Resolution:

The simulated technician identifies a loose USB connection. After reconnecting the keyboard securely, Windows recognizes the device and the employee can type normally.

Final Status: Resolved

Skills Demonstrated: Hardware troubleshooting, peripheral device support, Windows Device Manager, USB connectivity, problem-solving, and technical documentation.
