Ticket HD-002: Computer Cannot Connect to Wi-Fi

Ticket ID: HD-002

Date Reported: November 12, 2026

Department: Sales

Issue Category: Network Connectivity

Priority: High

Status: Resolved (Simulated)

User Description:

An employee reports that their Windows computer cannot connect to the company's wireless network. The employee is unable to access websites or company resources.

Initial Assessment:

The issue may be related to wireless connectivity, incorrect network configuration, an IP address problem, or a router/access point issue.

Troubleshooting Steps:

1. Verify that Wi-Fi is enabled on the computer.
2. Confirm that the employee is connecting to the correct wireless network.
3. Run the "ipconfig" command to review the computer's network configuration.
4. Use "ping" to test connectivity to the default gateway.
5. Use "ping 1.1.1.1" to test external network connectivity.
6. Use "nslookup google.com" to test DNS name resolution.
7. If necessary, reconnect to the wireless network or escalate the issue to the network administrator.

Resolution:

The simulated technician identifies an incorrect wireless connection configuration, reconnects the computer to the correct network, and verifies connectivity.

The employee successfully accesses the internet and company resources.

Final Status: Resolved

Skills Demonstrated: Network troubleshooting, Windows command-line tools, IP addressing, DNS troubleshooting, connectivity testing, and technical documentation
